

Bli ventilationsmontör

FRISK LUFT OCH ENERGISMARTA BYGGNADER

Provide a breath of fresh air – become a ventilation fitter

Ventilation fitters carry out installation of ventilation systems in buildings, ensuring there is fresh air to breath indoors. And with development moving quickly, there is every opportunity to specialise.

Flexible, varied and sociable

The job involves working with a wide range of professions, great freedom with responsibility and varied working tasks. Fitting ducts, fans and aggregates is most common, although sometimes you'll work with production in the workshop. The job may also include adjustment, maintenance and checking of ventilation systems. This is the complete opposite of a sedentary office job, where your working day is planned to the smallest detail.

Get work right away

Qualified ventilation fitters are in great demand on the labour market, and there are

major shortages throughout the country. This means there is an excellent chance of getting work straight after completing a course.

Careers

Those pursuing a career as a ventilation fitter can eventually choose to specialise as an energy optimiser, installation coordinator, adjuster, project engineer, ventilation technician or inspector. You can also do further training towards becoming a technician, supervisor or project manager, for example. After a few years, a lot of people also choose to become self-employed.

Becoming a ventilation fitter

There are five different training paths for becoming a ventilation fitter.

1. The three-year HVAC and Property Maintenance Program at upper secondary school

There is a two-year apprenticeship period on completion of the course.

2. Company based upper-secondary course

Available at some upper-secondary schools, which have no ventilation path themselves. Additional training is provided by the industry school, PVF Teknikcentrum, in Katrineholm.

3. Company apprenticeships

Employment and training at companies. Additional training is provided by the industry school, PVF Teknikcentrum, in Katrineholm.

4. Labour market training

45 weeks' training through the Swedish Public Employment Service, of which around 25 are provided by an industry-approved training coordinator.

5. Training at Komvux

In some parts of the country, you can spend a year training at Komvux. Educators must be industry-approved, with their own workshops and vocational trainers.

Demand is high!

There is a big demand for more qualified ventilation fitters in the industry both now and in the future.

The role of PVF Yrke & Utbildning is to inform, recruit, and create training opportunities so that more young people can discover the ventilation profession.
